Qualifications

- Demonstrated history of working in **React, TypeScript, Next.js** and **Node.js**
- Experience in **DevOps** and CI/CD setup
- Experience working with **NoSQL** databases like MongoDB
- Familiar with state management techniques like **Redux** and **Context**
- Experience working on AI tools like **Copilot** and **Windsurf**

Technical Skills

Programming languages: Java, JavaScript, TypeScript, C#, Python

Frameworks: Angular 2+, React (16.8+), React Native

Database systems / Query languages: MySQL, MongoDB(with Atlas cloud), Firebase, GraphQL

Version control systems: GitHub, Bitbucket, JIRA

Markup languages: HTML5, CSS, Bootstrap, React Material Design

Hosting / Orchestration environments: Heroku, Firebase, GitHub pages, Docker, Swarm, Kubernetes

Education

Master of Applied Computing ***September 2019 – December 2020***
University of Windsor, Windsor, Ontario
Bachelor's in Computer Science & Engineering ***August 2012 - May 2016***
Panimalar Engineering College, Chennai, India

Experience

May 2022 – Present
Senior Software Engineer (Tech lead), realtor.com, Vancouver
***Technologies used* – React, Next.js, GraphQL, Node.js**

- Specializing in front-end features to develop micro front ends using Next.js
- Working on Apollo GraphQL to create subgraphs and integrate them with the client
- Taking performance improvement initiatives and proactively improving application load times and code structure
- I also took additional responsibility as an interim tech lead, developing strategies to bring down KTLOs and streamline sprint planning.

March 2021 – May 2022
Software Engineer, IHS Markit (Now part of S&P Global), London
***Technologies used* – React, Node.js, .Net MVC5, SQL**

- Developed new features in frontend using React to match design specifications and conform to W3C standards
- Analyzed applications for possible vulnerabilities and worked on resolving them thus, reducing application load times
- Developed complex charts and tables to represent data in a more readable manner with increased efficiency and user experience
- Brainstorming and mentoring team about new package releases, code organization, and new ways of implementation once a week

December 2016 – July 2019
Software Engineer, Accenture Services, Chennai, India
***Technologies used* – Java, Angular 6, MySQL**
Role – Backend and Frontend developer, Client interaction, Agile Team member

- Gathered data and performed analysis to migrate the legacy application to Angular 6
- Worked with cross-functional teams to understand the requirement document and convert it to design models and reassign fixed bugs
- Participated in Knowledge transfer, Code review and building **CI/CD** pipelines using **Jenkins**
- Demonstrated **Test-Driven Development** and working in an **Agile** development environment

Achievements

Zenith Award ***June 2018***

- Awarded by Accenture for meeting defined critical **deadlines** in a short period in the category of 'Young Champion'

Academic Projects

Lets Talk Messenger ***January 2020 – March 2020***
***Technologies used* - MERN stack**

- Performed initial environment setups and documented requirements
- Briefed the team on goals and deadlines
- Organized daily stand-up calls to get everyone on the same page
- Organized tasks using productivity tools to keep track of development

Sci of Relief Web Application ***October 2019 – January 2020***
***Technologies used* - Angular 7 and Dialog flow API**

- Direct client interaction to understand requirements and suggested improvements
- Developed innovative solutions like a chatbot for human-like user interaction
- Followed responsive design using Bootstrap and Material UI for compatibility across screens
- Lead the team to meet defined milestones and completed the handover on time

Personal Projects

Task management application ***July 2020 – October 2020***
***Technologies used* – Nest.js, GraphQL**

- A backend project to create a task management application with the latest Nest.js and GraphQL-based application.

Online shop ***March 2020 – May 2020***
***Technologies used* – Node.js, MongoDB**

- An online shopping application built entirely using Node.js and server-side rendering

Lost in Separation ***January 2020***
***Technologies used* – React, Redux, Firebase**

- A prototype that was built for WinHacks 2020 in 36 hours. The application runs on a clustering algorithm to connect users from different communities based on their location data.

Burger Builder Web Application ***December 2019 – March 2020***
***Technologies used* – React, Redux, Firebase**

- A single-page application built using React with a real-time ordering experience

Technical Involvement and Certifications

- Certified SAFe 6 Scrum master
- Content writer at ContentLab.io
- Google Developer Group events (February 2020)
- Code to Win: Virtual Challenge (September 2019)
- 100 days of code – Python challenge
